VGCSL12 modothelial growth factor receptor 3 precursor (EC 2.7.1.112)
(VGCRR-3) (Tyrosine-protein kinase receptor FLT4).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ACTIVITY.

--- CATALITIC ACTIVITY: ATP + a protein tyrosine = ADP + protein tyrosine = ADP + protein tyrosine = ADP + protein --- SUBCELLULAR LOCATION: Type I membrane protein.

--- SUBCELLULAR LOCATION: Type I membrane protein.

--- TYROSUE SPECIFICITY: EXRESSED IN ADULT LUNG AND LIVER, AND IN FETAL LIVER, BRAIN, INTESTINE AND PLACENTA.

--- SIMILARITY: BELONGS TO THE CSF-1/PDGF RECEPTOR FAMILY OF TYROSINE-
                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PROSITE: PSOOLOT: PROTEIN_KINASE_ATP; 1.

-1- SUBUNIT: HOWODINER (PROBABLE).

-1- ALTERNATIVE PRODUCTS: AT LEAST TWO FORMS MAY BE PRODUCED BY ALTERNATIVE PRODUCTS: AT LEAST TWO FORMS MAY BE PRODUCED BY ALTERNATIVE SPLICING OF THE SAME GENE.

-1- TISSUE SPECIFICITY: FOUND IN THE HARD KERATINIZING TISSUES SUCH AS THE EPTTHELLA OF THE TONGUE, HOOF AND ROMEN.

-1- DOMAIN: CONSISTS OF NINE DOMAINS. DOMAIN TOWNEN.

-1- DOMAIN: CONSISTS OF NINE DOMAINS. DOMAINS TWO EF-HAND CALCIUW-BINDING DOMAINS. DOMAINS. DOMAINS OF PEPTIDE REPEATS

-1- DOWAIN: SEGULARITY, AND ARE THOUGHT TO FORM A SINGLE-STRANDED ALPHA-HELICAL ROD STABILIZED BY IONIC INTERACTIONS. DOMAIN 6 IS THE MOST REGULAR AND MAY BIND KIF DIRECTLY BY IONIC INTERACTIONS. DOWAINS 5 AND 7 ARE LESS WELL ORGANIZED AND MAY INDUCE FOLDS IN THE MOLECULE. DOMAIN 9 CONTAINS THE C-TERMINUS, CONSERVED AMONG THE MOLECULE. DOMAIN 9 CONTAINS THE C-TERMINUS, CONSERVED AMONG THE MOLECULE. DOMAIN 9 CONTAINS THE C-TERMINUS. CONSERVED AMONG THE MOLECULE. DOMAIN 9 CONTAINS THE C-TERMINUS. SOME 200-ARGININES ARE PROBABLY CONVERTED TO CITRULLINES BY PEPTIOYLARGININE DEIMIDASE.

-1- DOMAINS IN THE N-TERMINAL SECTION; BELONGS TO THE S-100
                                                                                                                                                                                                                                                                                                                                                                                                                                                         This SWISS-PROT entry is copyright. A. Title: Mapping of genes for the human C5a receptor (C5AR), human FMLP receptor (FPR), A. Reference number: A42009

A. Status: nuclate acid sequence not shown; not compared with conceptual translation A. Molecule type: DNA

A. Mesidues: 1. G. 2. 2. 8. 10-100, L'. 10. 2-104, 106-112, FpLA, 115-176, 178-182, 184-191, 'N', 194

B. Residues: 1. G. 2. 2. 8. 10-100, L'. 10. 2-104, 106-112, FpLA, 'I. Andrews, W.H.

A. Residues: 1. G. 10-109 of the gene coding for a human receptor for formyl peptides. Characteria A. Reference number: 15244; MUD: 19307562

A. Residues: 1. G. 10-109 of the gene coding for a human receptor for formyl peptides. Characteria A. Reference number: 15244; MUD: 19307562

A. Residues: 1. S. FPER

A. Status: preliminary; translated from GB/EMBL/DDBJ

A. Residues: 1. S. PERP

A. Cross references: GB: 549910; NID: 9260832; PIDN: AAD14906.1; PID: 94262758

C. Genetics: Status basen

A. Genetics: status absent

A. Municous: status absent

A. Municous: status basent

A. Monal: transmembrane status predicted < 700-70

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 33 Application US/08874678
Patent No. 5552199
GENERAL INFORMATION:
APPLICANT: Davis-Smyth, Terri L.
APPLICANT: Chen, Helen H.
APPLICANT: Presta, Leonard
APPLICANT: Presta, Napoleone
TITLE OF INVENTION: ACTIVITY, THEIR USES AND PROCESSES FOR THEIR PRODUCTION
NUMBER OF SEQUENCES: 48
CORRESPONDENCE ADDRESS:
ADDRESSE: Flehr, Hobbach, Test, Albritton & Herbert
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

Sequence 32, Application US/08643839

Patent No. 610071

GENERAL INFORMATION:

APPLICANT: Davis-Smyth, Terri L.

APPLICANT: Chen, Helen H.

APPLICANT: Ferrara, Leonard

APPLICANT: Ferrara, Napoleone
TITLE OF INVENTION: GROWTH FACTOR ACTIVITY, THEIR USES AND PROCESSES FOR THEIR
TITLE OF INVENTION: PRODUCTION
NUMBER OF SEQUENCES: 48
                                                                                                                       APPLICANT: Davis-Smyth, Terri L.
APPLICANT: Chen, Helen H.
APPLICANT: Chen, Helen H.
APPLICANT: Chersta, Leonard
APPLICANT: Forsta, Leonard
APPLICANT: Forsta, Leonard
APPLICANT: Forsta, Language
TITLE OF INVENTION: NOVEL INHIBITORS OF VASCULAR ENDOTHELIAL GROWTH FACTOR
TITLE OF INVENTION: ACTIVITY, THEIR USES AND PROCESSES FOR THEIR PRODUCTION
NUMBER OF SEQUENCES: 48
CORRESPONDENCE ADDRESS:
ADDRESSEE: Flehr, Hobbach, Test, Albritton & Herbert
STREET: Four Embarcadero Center, Suite 3400
CITY: San Francisco
STATE: California
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           2.0%; Score 7; DB 2; Length 1363; 100.0%; Pred. Patent No. 6100071
GENERAL INFORMATION:
APPLICANT: Davis-Smyth, Terri L.
APPLICANT: Chen, Helen H.
APPLICANT: Presta, Leonard
APPLICANT: Persta, Napoleone
TITLE OF INVENTION: GROWTH FATOR ACTIVITY, THEIR USES AND PROCESSES FOR THEIR
TITLE OF INVENTION: PRODUCTION
NUMBER OF SEQUENCES: 48
CORRESPONDENCE ADDRESS:
ADDRESSEE: Flehr, Hobbach, Test, Albritton & Herbert
STREET: Four Embarcadero Center, Suite 3400
                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 317, Application US/08513974B

Patent No. 6114139

GENERAL INFORMATION:

APPLICANT: Hosoya, Masaki

APPLICANT: Fulli, Ryo

APPLICANT: Fulli, Tetsuya

APPLICANT: Obgi, Kazulino,

TITLE OF INVENTION: G PROPEIN COUPLED RECEPTOR PROTEIN,

TITLE OF INVENTION: PRODUCTION, AND USE THEREOF

NUMBER OF SEQUENCES: 380

CORRESPONDENCE ADDRESS:

ADDRESSEE: DIKE, BRONSTEIN, ROBERTS & CUSHMAN, LLP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1.7%; Score 6; DB 3; Length 70;

Patent No. 5792632

GENERAL INFORMATION:
APPLICANT: Choulika, Andre
APPLICANT: Perrin, Arnaud
APPLICANT: Nicolas, Jean-Francois
TITLE OF INVENTION: Nucleotide Sequence Encoding the Enzyme
TITLE OF INVENTION: 1-SCEI and the Uses Thereof
NUMBER OF SEQUENCES: 52
CORRESPONDENCE ADDRESS:
ADDRESSEE: Finnegal
ADDRESSEE: Finnegal
ADDRESSEE: Dunner
                                       APPLICANT: Perrin, Arnaud
APPLICANT: Plessis, Anne
APPLICANT: Plessis, Anne
APPLICANT: Thierry, Agnes
TITLE OF INVENTION: Nuclectide Sequence Encoding the Enzyme
TITLE OF INVENTION: I-SCEI and the Uses Thereof
NUMBER OF SEQUENCES: 52
CORRESPONDENCES: 52
CORRESPONDENCE ADDRESS:
ADDRESSEE: Finnegan, Henderson, Farabow, Garrett &
ADDRESSEE: Dunner
STREET: 1300 I Street, N.W.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 14, Application US/09119024
Patent No. 5948678
GENERAL INFORMATION:
APPLICANT: Choulika, Andre
APPLICANT: Dujon, Bernard
APPLICANT: Nicolas, Jean-Francois
TITLE OF INVENTION: Nucleotide Sequence Encoding the Enzyme
Patent No. 5948678
TITLE OF INVENTION: I-SCEI and the Uses Thereof
NUMBER OF SEQUENCES: 52

```
The invention relates to nucleic acid sequences (ABAB1529-ABAB1552) that encode G-coupled protein-receptor related polypeptides

CG (ABB44527-ABB44543). The isolated polypeptide having a sequence differing by no more than 15 % of amino acid residues from one of 22 amino acid c sequences (or mature forms of the sequences), fully defined in the sequences (or mature forms of the sequences), fully defined in the sequences (or mature forms of the sequences), fully defined in the sequences (or mature forms of the sequences), fully defined in the sequences (or mature forms of the sequences), fully defined in the sequences (or mature forms of the sequences), fully defined in the consequence of specification and corresponding to human G-protein cardiant, antitarteriosclerotic, anabolic, cytostatic and antiviral activity. The polypeptides can be administered therapeutically, especially using gene therapy and expressing the encoding DNA in vivo, to treat or prevent conformation of the properties of specially in humans. For example, they can be used to treat/prevent cardiomyopathy, atherosclerosis, disorders of general disorders, disorders, orbasity, anorexia), diabetes, osteoporosis, crown's disease, multiple sclerosis, asthma, cancers, neurodegenerative disorders, disease, parkinson's disorders, developmental diseases, immune disorders, hadmanopoietic disorders, developmental diseases, neurological disorders, bacterial, fungal, protozoal and viral infections (e.g. with human control samples They are useful to identify agents binding polypeptide (e.g. cellular receptors or downstream effectors) and/or agents and adonists in disease treatment.

CG antagonists and agonists in disease treatment.
                                                                                                                                                                                                                                                                                                                                                                                                             treatment or prevention of GPCRX associated disorders e.g. cardiomyopathy or atherosclerosis, and to screen for antagonists and agonists useful therapeutically
